### Takeway

Q/A

- ▶ Literature has *largely* focussed on measuring IPv6 adoption [5, 6, 7] ('10 – '14).
  - ▶ Addressing
  - ▶ Naming
  - ▶ Routing
  - ▶ Reachability
- ▶ Very **little** work [8] on measuring performance of service delivery over IPv6.
- ▶ Largely due to **lack** of available content over IPv6.
- ▶ A number of *significant* events occurred during the span of this dissertation.

- ▶ IANA IPv4 Address Exhaustion [9]
- ▶ World IPv6 Day '11 [10]
- ▶ World IPv6 Launch Day '12 [11]
- ▶ RIR IPv4 Address Exhaustion [9]

Q/A

# TCP Connect Times | Trends (2013 - 2016)

$$\Delta s_a(u) = t_4(u) - t_6(u)$$

where  $t(u)$  is the time taken to establish TCP connection to website  $u$ .

- ▶ TCP connect times to popular websites over IPv6 have *considerably* improved over time.

Q/A

# TCP Connect Times | Who connects faster?

ALEXA top 10K websites (as of May 2016):

- ▶ 18% are *faster* over IPv6.
- ▶ 91% of the rest are at most 1 ms slower.
- ▶ 3% are at least 10 ms slower.
- ▶ 1% are at least 100 ms slower.

$$\Delta s_a(u) = t_4(u) - t_6(u)$$

Q/A

Samples where HE *prefers* IPv6 —

- ▶ HE prefers slower IPv6 connections **90%** of the time.
- ▶ Absolute difference is not that far apart from IPv4
  - ▶ 30% — at least 1 ms slower.
  - ▶ 7% — at least 10 ms slower.

$$\Delta s_a(u) = t_4(u) - t_6(u)$$

$$\Delta s_r(u) = \frac{t_4(u) - t_6(u)}{t_4(u)}$$

Can a lower HE timer provide same preference over IPv6 but not penalise IPv4 when it's faster?

Takeaway

Q/A

# Happy Eyeballs | Lowering HE Timer

- ▶ We control two<sup>2</sup> parameters and lower the HE timer value.
- ▶ Each data point is the 1<sup>th</sup> percentile preference towards ALEXA 10K websites.
- ▶ Lowering to 150 ms retains preference levels over IPv6.
- ▶ We get margin benefit of 10% (18.9K) because timer cuts early.

<sup>2</sup>99% ALEXA top 10K websites prefer IPv6 connections 98.6% of the time

## Can we fetch all webpage elements over IPv6?

- ▶ 27% of websites show some rate of failure over IPv6.
- ▶ 9% exhibit more than 50% failures over IPv6.
- ▶ 6% show complete failure (0% success) over IPv6.

Q/A

# Takeway

- ▶ ISPs should ensure CDN caches are dual-stacked from the very outset.
- ▶ ISPs should put latency as a first-class citizen.
- ▶ Measurements should be used to inform protocol-engineering.
- ▶ Metrics that measure IPv6 adoption should account for changes in IPv6-readiness.
- ▶ Limiting to root webpage can lead to overestimation of IPv6 adoption numbers.
- ▶ Let's deem a website IPv6-ready when there is no partial failure over IPv6.

## ▶ Measuring IPv6 Performance

- ▶ Measuring TCP Connect Times [NETWORKING '15]
- ▶ Measuring YouTube Performance [PAM '15]
- ▶ Measuring Effects of Happy Eyeballs [ANRW '16]
- ▶ Measuring Web Similarity [CNSM '16]

## ▶ Relevance:

- ▶ Network operators in *early* stages of IPv6 deployment.
- ▶ Content providers to see how their *service delivery* over IPv6 compares to IPv4.
- ▶ Drive related *standards* work in the IETF.
